

Andrew Schwartz, PhD, is Lead Research Scientist for the World Well-Being Project and postdoctoral fellow in Computer & Information Science and the Positive Psychology Center at the University of Pennsylvania. He focuses on large and scalable language analyses for health and social sciences. Utilizing natural language processing and machine learning techniques, he has discovered behavioral and psychological factors of health and well-being as manifest through language in social media. He received his PhD in computer science from the University of Central Florida in 2011 with research focused on acquiring lexical semantic knowledge from the Web. His recent work has been featured in *WIRED*, *Scientific American*, and *The Atlantic Cities*. Starting this Fall, he will be Assistant Professor at Stony Brook University (SUNY) and Visiting Assistant Professor at the University of Pennsylvania, Computer & Information Science.
