

Please consider the following aspects for the use of the 2020 CPR Capture System:

- Prior to completing the questionnaire, you must register to use the system. This feature will help you to partially fill out the questionnaire and continue later. It is important to have your email address and password registration at hand, as they will be your login to the System.

For convenience, after your registration, your access data will be sent to the registered email account.

LOG IN

- There are two options to navigate within the questionnaire. The first is through the visible menu on the left side of the screen, where the sections of the questionnaire are displayed.

The second is through the next and back buttons that are displayed at the end of each section of the questionnaire.

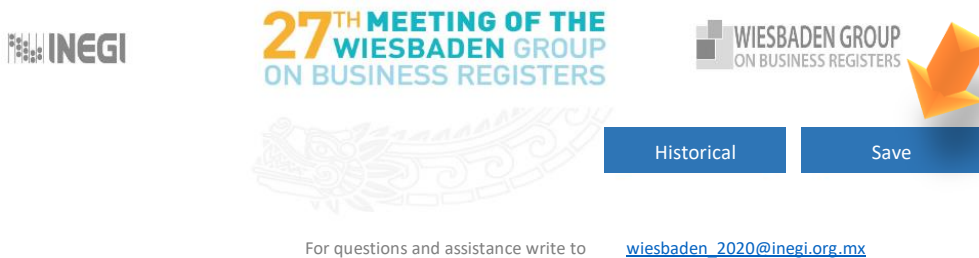

OPTION 1

OPTION 2

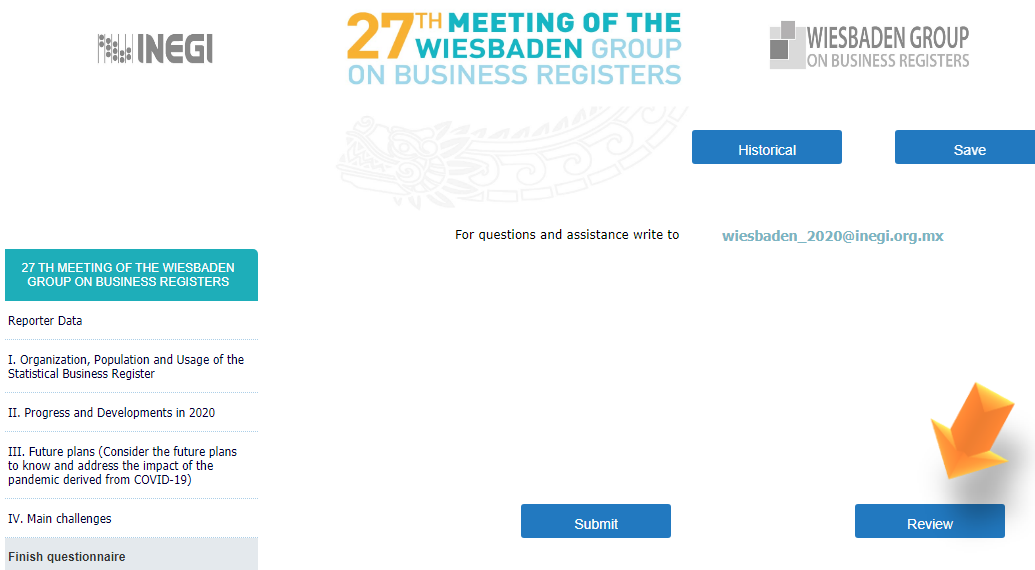

- There are mandatory response fields. In case any are missing, a notification message will appear indicating the questions that require your answer. By selecting the word "Edit" in the notification message, the system will automatically take you to the mandatory question that was not answered.

- You can start filling out the questionnaire and continue later. It is therefore important to click on the "Save" button before closing the System. This button will be visible at all times in the upper right part of the view.

- Please consider that, for security of information, the system is inhibited after 15 minutes, so you must re-enter the capture system and log in with your email and password. Once the questionnaire has been completed, you will have the option of viewing, downloading and printing your responses, prior to their submission.

- Once the questionnaire has been submitted, is no longer possible to modify it. In case you require any correction, please write to wiesbaden_2020@inegi.org.mx for assistance.

- The "Historical" button can be found in the heading. By selecting this option, you will be able to view, download and print the information from the 2019 CPR questionnaire received last year.
